Hiring Team
Acme Robotics – Backend Developer Student

Dear Hiring Team,

Acme Robotics' cloud platform team is where I want to grow as a backend developer: the services you describe – REST APIs in Node.js on top of PostgreSQL – are exactly what I have been building. As a Computer Science student at Tel Aviv University (GPA 88), I would like to bring that hands-on experience to the Backend Developer Student role.

In TaskFlow, a team project, I built the backend REST API: 18 endpoints in Node.js and Express with PostgreSQL and Prisma, including JWT authentication. I reached 85% test coverage with Jest, set up CI with GitHub Actions and deployed the application with Docker – so I am used to code that is tested, reviewed and shipped, not only written.

As a teaching assistant for Intro to Computer Science, I run weekly practice sessions for 40 students. Explaining code to forty people every week has taught me to break technical ideas into clear steps – a habit I bring to code reviews, documentation and teamwork.

I am available for 20–24 hours a week and would be glad to talk about how I can contribute to your platform team.

Best regards,
Noa Levi
